The Klösterl-Pharmacy, founded by pharmacist Johannes Zeise-Wallbrecher in 1983, is situated directly next to Munich's underground station "Goetheplatz" (Underground Lines U3/U6). Apart from experienced advisory and delivery services for patients, our main focuses lie in individual production of recipes, instructed by therapists, physicians and hospitals. Furthermore, we specialize in sterile preparations of different kinds of parenteralia, as well as capsules and powder recipes for orthomolecular therapies.

We store tea- and herbal extracts for the production of pills or suppositories, as well as ointments or herbal potions. The preparations of individual homoeopathic mixtures also belong to our craft skills, as well as providing solutions and answers to queries on side effects of medications and on research for interaction.

For an intensively professional attendance towards physicians and practitioners we continuously extend our password-secured therapeutical online-platform www.kloesterl-infoportal.de, where members of all medical professions may gather information on the register of formulas prepared by the Klösterl pharmacy, intravenous protocols, homoeopathic pocket first aid kit and about specially composed testing sets for Applied Kinesiology, as well as for other testing methods.

The hypoallergenic nutritional supplements from our "Klösterl-Pharma-Line" are produced under hypoallergenic quality criteria and are distributed by pharmacies and health centres.
